- 2. Prem Anant Shelar 218544**

Under the Guidance of

Mrs. Rasika Kulkarni

[2022 – 2023]

**Deccan Education Society's
Fergusson College (Autonomous), Pune.
Department of Computer Science**

(CSC3609) Computer Science Project-II

CERTIFICATE

This is to certify that the project entitled

Blood Bank Management System Completed by

Roll number Name

1. 218557 Sourav Uttam Borgave
2. 218544 Prem Anant Shelar

in partial fulfillment of the requirement of the completion of B.Sc.
(C.S.) Semester-VI, has been carried out by team under my guidance
satisfactorily during the academic year 2022-2023.

Place: Pune

Date: / /2023

(Mrs. Rasika Kulkarni)

Project Guide

(Dr. Kavita A. Khobragade)

Head, Computer Science Department

ACKNOWLEDGEMENT

We would like to express our special Thanks of gratitude to our Project Guide **Mrs. Rasika Kulkarni** under her guidance we learned a lot about this project. Her suggestions and directions have helped us in successful completion of this Project: **Blood Bank Management System**.

We would also like to Thank our Head of the Department, **Dr. Kavita A. Khobragade** for this opportunity and her constant support to do this Project.

Finally, we would like to thank our **Friends** who have helped us with their valuable suggestions and have been very helpful in various stages of project completion.

1. **Sourav Uttam Borgave** 218557
2. **Prem Anant Shelar** 218544

1. INTRODUCTION

This blood bank management system is an online website, so it is easily available to everyone. When a person wants to donate blood, he must register to the system. Donor registration is very easy, to get registered to the system he must fill up a registration form. After submitting the registration form, he can create a username and password. The donor must give information like blood group, contact details etc. The donor can also change his account information when he wants using his username and password.

The main aim of developing this system is to provide blood to the people who need blood. The number of persons who need blood are increasing in large number day by day. Using this system user can search blood group available in the city and he can also get contact number of the donor who has the same blood group he needs. To help people who need blood, this Online Blood Bank management system can be used effectively for getting the details of available blood groups and user can also get contact number of the blood donors having the same blood group and within the same city. So, if the blood group is not available in the blood bank the user can request the donor to donate the blood to him and save someone's life. Using this bank management system people can register themselves who want to donate blood. To register in the system, they must enter their contact information like address, mobile number etc.

1.1 Detailed Problem Definition:

The existing system is handled manually. Existing system needs to maintain almost hundreds of records every day. In the emergency condition, sometimes it becomes very much difficult to look for the exact match of blood group of donor and acceptor. It may lead to delay in transaction of blood within the specified amount of time and a serious accident may take place.

Problems with Existing system are the following: -

- Manual systems are more time consuming.
- Many ledger books has to be maintained for each donor.
- Data security is very minimal.
- There is a possibility for double entries.
- Since the transaction are mainly viz. paperwork updating of data is very hard.
- Generating the reports in the desired format is a tedious process.□
- Reporting to the higher officials is not done through the proper channel.
- Data stored on papers is subject to loss due to physical damage.

1.2 Presently Available Systems for the same:

The operation of the blood bank is still maintained by manual system (i.e., Registers, etc). The operations are tedious, time consuming and space consuming.

It creates room for errors as the data is entered manually by the person. Maintaining the stock of the blood and the daily transactions/ consumptions without computers also poses a challenge for maintaining the huge records.

1.3 Need for the New System:

Blood bank management system in php is planned to collect blood from many donators in short from various sources and distribute that blood to needy people who require blood. To do all this we require high quality software to

manage those jobs. The government spending lot of money to develop high quality “Blood Bank management system project”.

1.4 Project Scope:

The scope of the new project focuses on three basic operations of the blood bank that is donor registration, monitoring the inventory of blood and monitoring the blood bags issuance.

- A person who wants to donate blood can register himself directly on the application.
- No need of filling so many forms just need to login and make an appointment.
- Admin will maintain the record and security so that none of the users can donate more than once a month.
- Donor can now check the new date which has been updated by the Admin.
- The whole process of getting work done will become faster than the conventional method of donating blood to the blood bank.

2.ANALYSIS

2.1 Feasibility Study

1.Technical Feasibility: -

The scope was whether the work for the project is done with current equipment and the existing system technology has to be examined in the feasibility study. This system requires very low system resources and it will work in almost all configurations. In the existing system all functions are done manually. So, if they get this designed software, the problem can be avoided, and the system will also run smoothly.

In the proposed system, data can be easily stored and managed using database management system.

The minimum requirement to perform our project is: -Code Editor, Any Browser, XAMPP Server.

Technical Requirements: -Monitor, Keyboard, Mouse, at least 4GB RAM, 256GB or 512GB storage, CPU-32 bit or 64-bit; -i3 10th gen, Server to store the client data.

2. Economical Feasibility: -

This study is very essential because the main goal of the proposed system is to have economically better the result along with increased efficiency. Thus, the developed system has well within the budget, and this was achieved because most of the technologies used are freely available.

Installation of new system will reduce administrative and operational cost. The newly developed software/website that doesn't require any existing

manual paperwork and files. Hence the software/website is Economically feasible.

3.Operational Feasibility: -

The aspect of study is to check the level of acceptance of the system by the user. The proposed system is an upgraded version of the current system as the new fields have been implemented according to the user's need, hence it ensures a user-friendly environment in such a way that it ensures all the aspects. The proposed system is very much user friendly and the system is easily understood by simple training and it is operationally feasible to use by any user.

3.DESIGN

3.1 Database Table Designing: -

Sr. No.	Table 1	Relationship	Table 2
1.	Donor	1-M	Blood Bank
2.	Patient	M-1	Blood Bank
3.	Blood bank	M-M	Hospital
4.	Blood bank	M-1	Manager
5.	Registration	1-1	Blood bank
6.	Registration	1-1	Donor
7.	Registration	1-1	Patient

Table Name: Admin			
Sr. No.	Field Name	Field type	Description
1.	Name	varchar	To get the details of the admin
2.	password	varchar	

Table Name: Blood bank			
Sr. No.	Field Name	Field type	Description
1.	BB_username	varchar	In this table the details of Blood bank are taken for login purpose.
2.	BB_name	varchar	
3.	Email	varchar	
4.	passwd	int	

Table Name: Donor			
Sr. No.	Field Name	Field type	Description
1.	D_id	int	To create the Donor account and get user_id and password.
2.	Name	varchar	
3.	Blood Group	varchar	
4.	Gender	varchar	
5.	Age	int	
6.	Address	varchar	
7.	DOD	Date	
8.	Contact	int	
9.	Next date	Date	
10.	passwd	varchar	

Table Name: Patient			
Sr. No.	Field Name	Field type	Description
1.	P_id	int	To create the Patient account and get user_id and password.
2.	Name	varchar	
3.	Blood Group	varchar	
4.	Gender	varchar	
5.	Age	int	
6.	Address	Varchar	
7.	DOI	Date	
8.	Contact	int	

Table Name: Hospital			
Sr. No.	Field Name	Field type	Description
1.	H_id	int	We can get hospitals list where to donate and how much donate the blood.
2.	H_name	varchar	
3.	H_Location	Varchar	
4.	District	varchar	
5.	Contact	int	
6.	Apos	Int	
7.	Aneg	Int	
8.	Bpos	int	
9.	Bneg	int	
10.	ABpos	int	
11.	ABneg	int	
12.	Opos	int	
13.	Oneg	int	

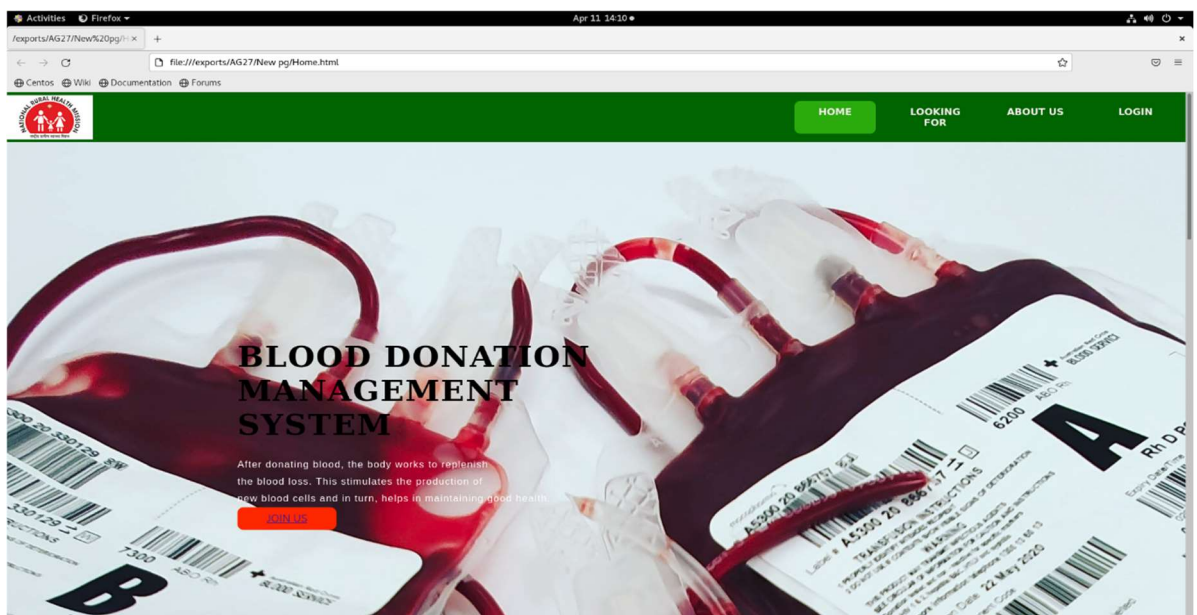

Table Name: Blood_bank			
Sr. No.	Field Name	Field type	Description
1.	BB_name	varchar	We can Blood bank Detail list where to donate and how much donate the blood.
2.	BB_id	int	
3.	Location	Varchar	
4.	Expiry date	date	
5.	Contact	int	
6.	Apos	Int	
7.	Aneg	Int	
8.	Bpos	int	
9.	Bneg	int	
10.	ABpos	int	
11.	ABneg	int	
12.	Opos	int	
13.	Oneg	int	

3.2 Input and Output Screen and Reports

The screenshot shows a web browser window with the address bar displaying 'file:///exports/AG27/New pg/patient.html'. The page features a 'REQUEST' form with the following fields:

- Personal Details:**
 - Full name: enter your name
 - Age: enter your age
 - Gender: Select
 - Blood group: Select
 - Address: enter your Address
 - Mobile number: enter mobile number
- Details ID:**
 - Addhar card no.: enter addahar no.
 - Date Of intake: mm / dd / yyyy

At the bottom of the form are two buttons: 'SUBMIT' and 'Back'.

The screenshot shows a web browser window with a single tab titled 'update'. The address bar displays the URL '192.168.16.1/AG27/New pg/userupdate.php?r1=+300030003000+'. A modal form titled 'UPDATE DATE' is centered on the screen. The form contains two input fields: 'Address' with the placeholder text 'enter your Address' and 'Mobile number' with the placeholder text 'enter mobile number'. Below these fields are two buttons: 'SUBMIT' and 'Back'. The background of the browser window is a blurred image of a poster that says 'BLOOD DRIVE TODAY'.

The screenshot shows a web browser window with a single tab titled 'About us'. The address bar displays the URL '192.168.16.1/AG27/New pg/aboutb.html'. The page has a solid orange background. At the top, the title 'Blood Donation' is displayed in a large, bold, black serif font. Below the title, there is a light brown rectangular box containing three lines of text, each preceded by a hash symbol (#):
Once the pre-donation screening is finished, you will proceed to a donor bed where your arm will be cleaned with an antiseptic, and a professional will use a blood donation kit to draw blood from a vein in your arm.
If you are allergic to iodine, be sure to tell the phlebotomist at this point.
During the donation process, you will donate one unit of blood; this takes about six to ten minutes.

2)	Donor Registration	Checks whether all the required fields are correctly filled or not.	Donor will successfully registered or an error message occurred	Registration will be successful & account will be accepted	
3)	Blood bank Login	Checks all the details of user that is taken from Admin	Blood bank will successfully login or an error message is displayed	Login will be successful & account will be accepted and inserts hospital details.	
4)	Admin Manages	Admin will manage the system	Admin will successfully manage the system	All records will be successfully managed by Admin	
5)	Add, Update, Delete Person	Admin will manage persons	Admin will successfully manage the persons	All persons will be successfully updated by Admin	

7.Limitations & Future Enhancements

7.1 Limitations

Limitation of blood donation management website and future enhancements

- There are several limitations of a blood donation management website, including:
- Limited reach: The website may not reach all potential blood donors due to limited internet access and awareness of the website's existence.
- Lack of real-time updates: The website may not have real-time updates on blood donation needs and availability, which can lead to confusion and delays in getting the necessary blood to patients.
- Inadequate data security: The website may be vulnerable to cyberattacks and data breaches, compromising the confidentiality of donor and patient information.
- Limited integration with other healthcare systems: The website may not be integrated with other healthcare systems, making it challenging to coordinate blood donation efforts with other healthcare providers.

7.2 Future Enhancements

- To enhance the effectiveness of a blood donation management website, several future enhancements can be considered, including:
- Mobile app: Developing a mobile app can expand the website's reach and increase donor engagement by providing real-time updates and alerts on blood donation needs and opportunities.
- Integration with electronic health records (EHRs): Integrating the website with EHRs can improve the coordination between blood donation efforts and patient care by providing real-time data on patient blood needs.
- Improved data security measures: Implementing robust data security measures can help protect donor and patient information from cyberattacks and data breaches.
- Personalized messaging: Providing personalized messaging and incentives can encourage repeat donors and increase donor engagement.
- Social media integration: Integrating the website with social media platforms can expand the website's reach and increase donor engagement by leveraging social media's viral nature.

8.Conclusion

Overall, implementing these enhancements can help overcome the limitations of a blood donation management website and improve the efficiency and effectiveness of blood donation efforts.

For both donors and acceptors, the proposed Blood Bank Management System provides a dependable platform. A web-based program called the BBMS

helps to reduce difficulties with data redundancy and human mistakes. It is a quick and effective way to communicate without any security risks because the data for both donors and acceptors, the proposed Blood Bank Management System provides a dependable platform. A web-based program called the BBMS. It helps to reduce difficulties with data redundancy and human mistakes. It is a quick and effective way to communicate without any security risks because the data entered will be regularly updated and validated, increasing the likelihood that someone will be saved from death. Furthermore, it is made more accessible by the availability of a location-based system that allows one to find the closest blood bank using Google Maps. Entered will be regularly updated and validated, increasing the likelihood that someone will be saved from death. Furthermore, it is made more accessible by the availability of a location-based system that allows one to find the closest blood bank using Google Maps.
